65%
FASTER TRAINING OF NEW EMPLOYEES

30%
IMPROVED WORKPLACE SAFETY

ROI
WITHIN 9-18 MONTHS

MULTILINGUAL
SUPPORT FOR INTERNATIONAL TEAMS

What is Voicextreme?

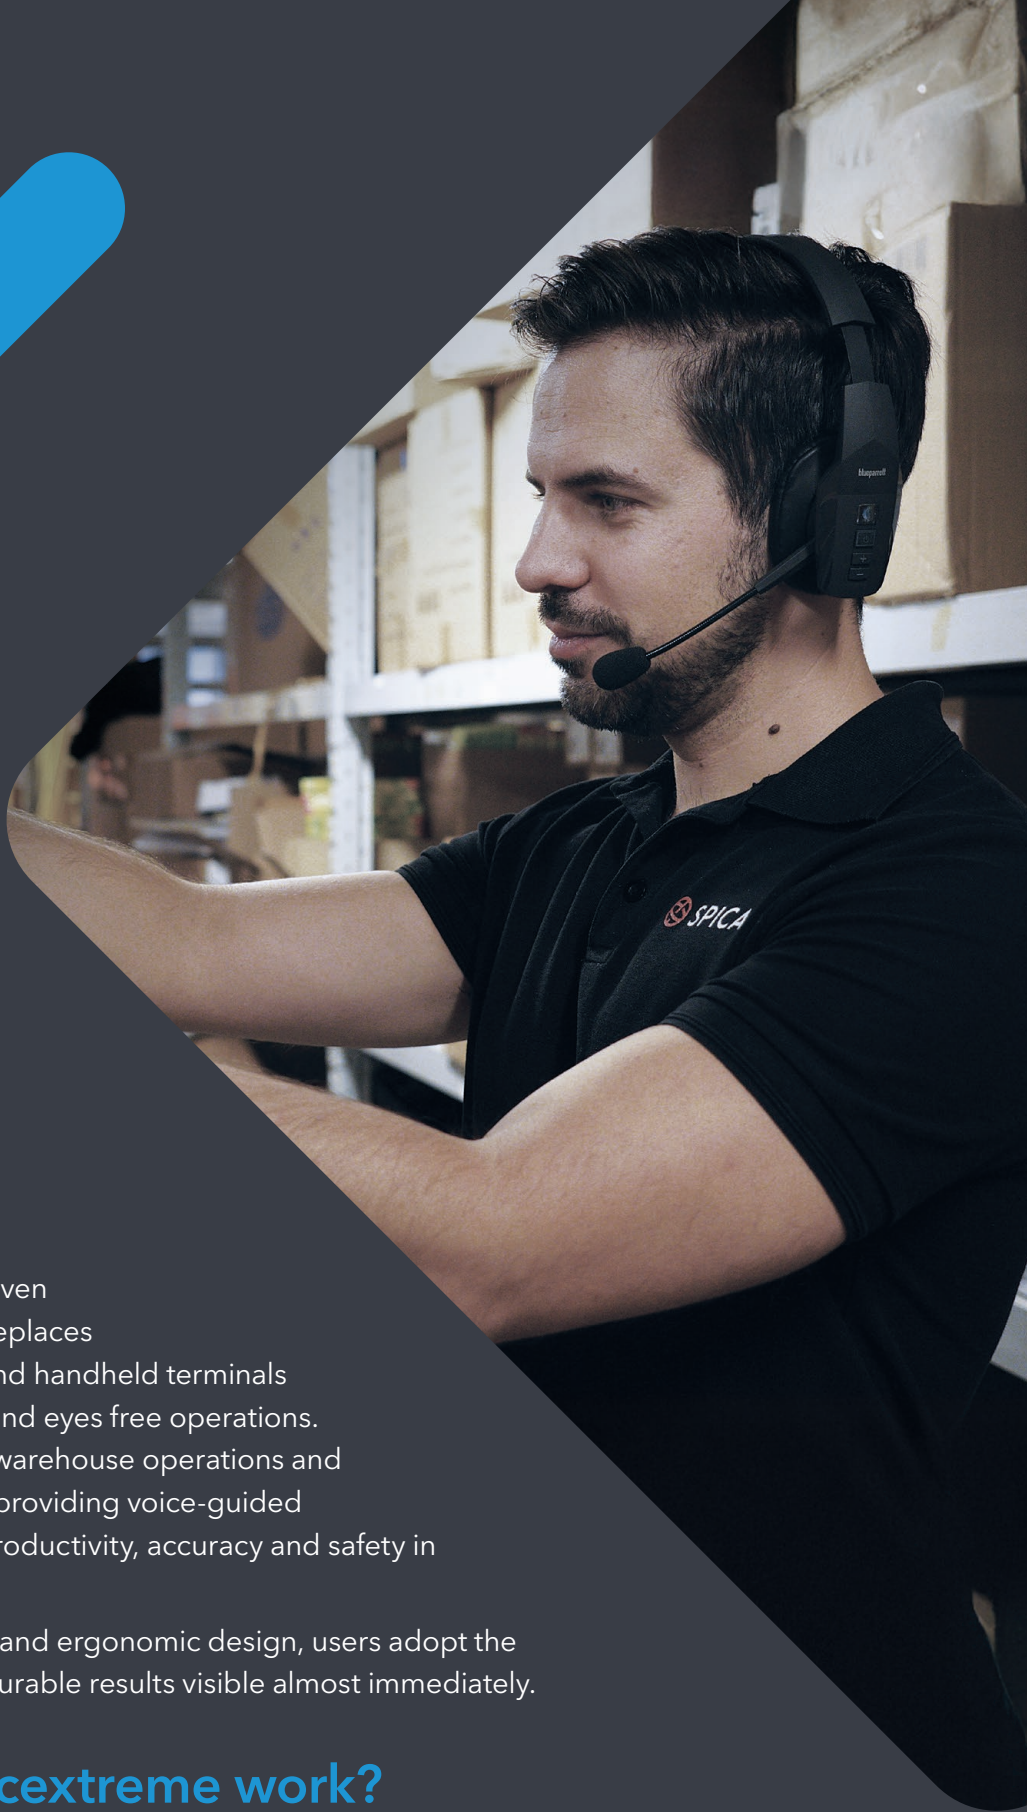

VoiceXtreme is a voice-driven warehouse solution that replaces paper-based processes and handheld terminals with intuitive, hands free and eyes free operations. It is designed to manage warehouse operations and supply chain activities by providing voice-guided workflows that increase productivity, accuracy and safety in distribution centers.

Thanks to fast integration and ergonomic design, users adopt the system quickly, with measurable results visible almost immediately.

How does Voicextreme work?

Operators interact with the system entirely through voice - using headsets and Android-based devices. They receive spoken instructions and confirm completed tasks verbally, while the software exchanges data with your WMS or ERP system in real time.

This ensures full traceability and high data accuracy without additional manual data entry.

Application in distribution centers

VoiceXtreme supports a wide range of warehouse processes, including goods receiving, put-away, replenishment and relocation, as well as order picking, consolidation, cycle counting and equipment checks.

The solution scales seamlessly from small warehouses to large distribution centers and can be easily adapted to industry-specific workflows.

DISTRIBUTION & RETAIL

FMCG

FOOD & BEVERAGE

E-COMMERCE

3PL / LOGISTICS

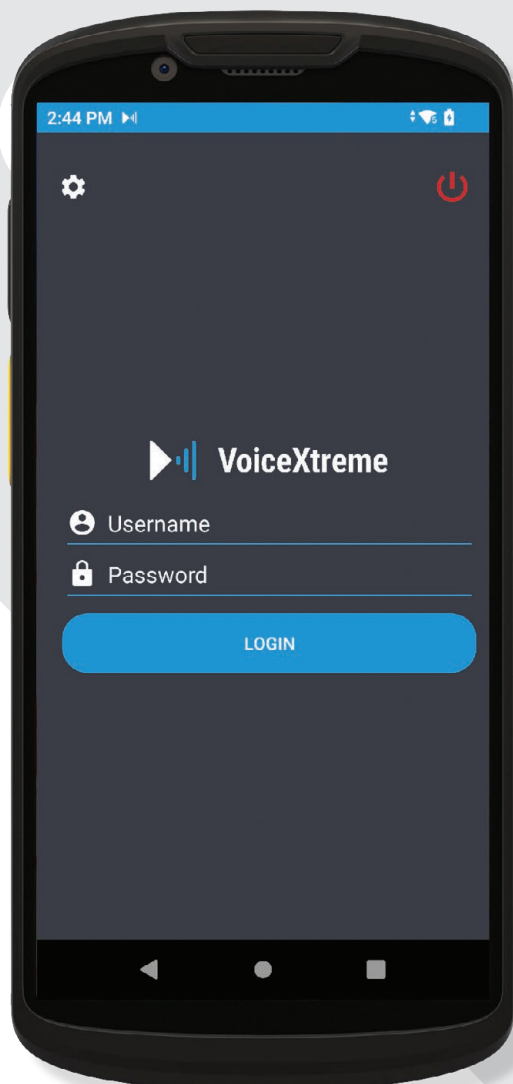

PHARMACEUTICALS

Flexibility - Scalability - Multilingual Support

Start with voice picking and gradually expand the system to additional processes such as receiving, replenishment, inventory management and more.

VoiceXtreme supports additional devices and technologies, including barcode scanners and Autonomous Mobile Robots (AMRs).

The solution offers multi-language support, enabling faster employee onboarding and reliable operation in demanding warehouse environments with varying noise levels, temperatures and working conditions.

How Voicextreme Addresses Key Operational Challenges?

Increased productivity

Operators stay fully focused on the task at hand - without distractions.

Result: faster processes and higher throughput.

Improved accuracy

Combining voice guidance with barcode scanning significantly reduces errors and increases operational precision.

Safer warehouse operations

Hands free and eyes free operation allows workers to stay aware of their surroundings, reducing the risk of accidents.

Reduced training time

Voice interaction is based on natural speech.

With minimal training, employees quickly become productive - often within a single day.

Higher employee satisfaction

Voice-guided picking simplifies daily warehouse tasks, increasing employee satisfaction and motivation. By reducing common operational frustrations, VoiceXtreme helps lower staff turnover.

Cost efficiency

No major infrastructure investments or expensive customization required.

The system is scalable from a single user to hundreds and can be easily adapted to seasonal demand peaks.
